27th September 2010

Dear Nigel,

On behalf of the Tropical Green Building Network, I would like to invite you to give a presentation at our next meeting on Wednesday November 3rd.

The Tropical Green Building Network (TGBN) is a network of professionals working to promote sustainability in all aspects of the building industry. The network meets every month to discuss current projects, future plans and relevant issues.

Construction and demolition waste is an important issue to consider in working towards sustainability in the building industry. TGBN members share Council's goal of increasing the reuse and recycling of construction and demolition waste with the aim of reducing waste to landfill and improving resource efficiency.

The TGBN invites you to provide a synopsis of how Council's Waste Management Strategy relates to construction and demolition waste; future plans for dealing with construction and demolition waste; and possibilities in our region to develop markets for recycled building materials. The presentation would be for around 15-20 minutes followed by discussion, and would be held from 6pm. Meetings are held upstairs at Cominos House, 27 Greenslopes St, Edge Hill.

I hope you are able to attend the meeting, as your contribution would be much appreciated. Please feel free to contact me if you have any questions.

Kind regards,

Anna McGuire.
Urban Sustainability Campaigner
Cairns and Far North Environment Centre and the Tropical Green Building Network
