

Keeping your cool: cutting costs with clever heating and cooling

This forum focuses on the latest air conditioning, refrigeration, and heating technologies as well as smarter methods and processes. Find out how to stop wasting money on energy, understand what to look for in technology and get on the road to sustainability.

Reduce your overheads:

Find out about the latest innovative technologies and best practices in air conditioning, refrigeration, ventilation and heating including energy efficiency, staff behaviour and measuring for cost improvements.

Find out how others did it:

Listen to local case studies on tried and tested sustainable solutions that will help you make informed decisions.

Build networks to improve your bottom line:

Meet local business and professionals who can assist you on your path to success.

Get ahead of competitors:

Visit the trade display tables to see the best of the best products and services available. Discover the latest grants and funding available to make your business more sustainable, affordably.

Who should attend?

- Facility managers, building operators
- Engineers, designers
